**DETAILED ACTION**

*Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Applicant's Admitted Prior Art (discussed in the Background of Invention).

The Applicant's APA discloses the structure of the MMC is a conventional standard memory card. The MMC card has a contact structure compatible with a conventional all-in-one card reader which includes a SD/MMC receptacle.

The convention MMC card is insertable and fitted into the SD/MMC receptacle and therefore it is compatible with the SD/MMC receptacle.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2833

4. Claims 5-9, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (discussed in the Background of Invention) in view of Brisson (France 88 02353).

The Applicant's APA discloses the structure of the MMC card and the SD card are conventional standard memory card. The standard MMC card has the same dimension structure as the standard SD card but have less terminals than the SD card.

The Applicant's APA does not disclose the standard MMC card having an additional terminals in the same body of the MMC card so as it can also be functioned as an SD card.

Brisson teaches a multifunction card (10) having one set of terminals (12, 13) and additional set of terminals (14, 15) on the same body of the multifunction card (10). The multifunction card can be able to perform multifunction.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to integrate the MMC and SD card into one by providing an additional terminals into the standard MMC card, as taught by Brisson for reducing number of separate cards.
